To: Jameal Samhouri <Jameal.Samhouri@noaa.gov>

I attached a file as an example but I like the data in

Long format  
csv file

**with the following columns:**

- (1) year - this can be just year or a date, preferably in yyyy or yyyy-mm-dd format.
- (2) index - this column contains the data you want to plot
- (3) timeseries - title for the time series plot.
- (4) metric - how the data were measured; essentially the label for the y-axis
- (5) SE or SD if you have it

NAs or blanks will not be plotted  
Zeros will be plotted  
You don't have to fill in missing years

**File naming.**

Submit the same file name each year.

Do not put a date on the file. I add a FY tag within R.

We give files a prefix so that similar files and figures sort together. I'd suggest FPN- or fpn- or fisheries participation networks. Then the rest of the name. See the attached example.

I'll let you know when the figures are produced.

NT
